

19th ESMATS Related Courses

Continuing a successful tradition of previous ESMATS, a series of specific Space Mechanisms related technical trainings will be offered in order to help you to further broaden and deepen your mechanisms skills. This year the trainings will take place the week before ESMATS, or in the morning before the ESMATS presentations.

Benefiting from the flexibility offered by the fact that all courses and ESMATS will take place online only, we are proud this time to be able to propose 4 complementary courses

- Space Tribology Course (STC), from ESTL
- Advanced Mechanisms Design Course (AMDC), from ESA mechanisms Experts
- Fundamentals of Space Vehicle Mechanisms (FSVM), from Launchspace
- Compliant Mechanisms Design Course (CMDC), From CSEM

ESMATS 2021 related courses' schedule

In order to register to these courses, you will have to separately select each course of interest from the web page: <https://www.esmats.eu/esa/training-courses/> and follow their specific registration info and payment requests.

It is possible to sign up for more than one course, taking into account the following training agenda.

Please note that you cannot register to the AMDC (ESA) and FSVM (Launchspace) courses as they will be taking place at the same time.

Due to the nature of the information that will be provided during the AMDC (ESA) and CMDC (CSEM) courses, these courses will be limited to ESA Member and Co-operating states (ONLY) while the STC (ESTL) course will be limited ESA Member, Co-operating states and USA (ONLY).

On the other hand, the FSVM (Launchspace) course is open to more countries (see further details in the specific FSVM registration).

A minimum and maximum participation may apply for these courses.

More info about the content of each course can be found on the dedicated web page: <https://www.esmats.eu/esa/training-courses/>
